

TANK Earth Braid

The perfect continuity in a cable earthing system

Application

The flat 10m² copper braid conductor is used to complete the continuity in the cable earthing system. This, when clamped firmly, provides a low electrical resistance connection for a dependable shield bonding, and its physical strength substitutes as a strain relief across cables.

The earth braid can be supplied with or without eyelets, depending on the type of application required. The fitted eyelets can accommodate shield bonding connectors, with studs up to 6mm.

Features

- Robust
- Non-corrosive
- Easy installation
- Earthing continuity

TECHNICAL INFORMATION

ORDERING INFORMATION:

Tin Copper Braid 10m² per metre

TANK EARTH BRAID KITS:

1. Part No.: **TEBK 2000 M105 - 1110**

Tin Copper Braid 10m² x 10m with eyelets
Plastic mesh 12.5mm x 5m

2. Part No.: **TEBK 3000 M105 - 1120**

Tin Copper Braid 10m² x 5m with eyelets
20 shield bond connectors

Size: 13 x 10mm - with eyelets 100mm apart.
